RE: Opposition to Weakening, Overturning, or Exemptions to Consumer Financial Protection Bureau (CFPB) Rule 1071

Dear Chairs and Ranking Members,

We, the 132 undersigned organizations, write to express strong opposition to any current or future initiatives to weaken, overturn, or provide exemptions to the Consumer Financial Protection Bureau (CFPB) Rule 1071 on Small Business Lending Data Collection under the Equal Credit Opportunity Act.

Current efforts that attempt to weaken CFPB rule 1071 include:

- HR 2423, the Farm Credit Independent Authority Act, which would exempt Farm Credit System lenders from CFPB Rule 1071;
- HR 1806, the Small Lenders Exempt from New Data and Excessive Reporting (LENDER) Act;
- HR 1810, the Business Loan Privacy Act.

Section 1071 of the Dodd-Frank Act amended the Equal Credit Opportunity Act (ECOA) to require financial institutions to compile, maintain, and submit to the Bureau certain data on

applications for credit for all defined small businesses, including women and minority-owned small businesses. To be clear, Section 1071 is not optional – it is legally required under the Dodd-Frank Act. CFPB’s regulatory updates are designed to implement Section 1071 as intended by Congress, and our organizations strongly support this effort.

The CFPB's regulatory updates are common sense efforts to improve the public’s understanding of the on-the-ground impacts of lending (including agricultural lending), and ultimately to inform policy that is tangible and beneficial for farmers, consumers, and our food and farm systems.

Rule 1071 Is Pro-Farmer and Pro-Market

The Section 1071 rule is pro-farmer. Young, beginning, and small farmers have consistently demanded more transparent and fair markets. Having accurate and public data concerning the demographics primarily served by agricultural lenders will help farmers and consumers make better-informed financial decisions.

The Section 1071 rule is pro-market. The data required by Section 1071 will help lenders identify unmet credit needs and expand to new markets, especially in underserved and rural communities. The rule contains no mechanism to penalize lenders based on the demographic data reported. Collecting loan applicant demographics is not new to the vast majority of lenders covered by this rule.

Why Agricultural Lending Data is Critical

Creating effective and fair policy requires comprehensive and transparent data collection and analysis. To help ensure collection of more comprehensive agricultural lending data, it is critical that agricultural lenders — including those regulated by the Farm Credit Administration – participate in demographic reporting.

The Farm Credit System is among the country’s most significant agricultural lenders, holding 44 percent of farm debt at the end of 2021.¹ But without data transparency, the public does not know which farmers are being served and which may be left behind, despite Farm Credit’s unique responsibility to the public as a government-sponsored enterprise. **Many Farm Credit System lenders already collect home loan borrower demographics**, as required under the Home Mortgage Disclosure Act.

Two Government Accountability Office reports support the application of Section 1071 to agricultural lending: *Agricultural Lending: Information on Credit and Outreach to Socially Disadvantaged Farmers and Ranchers Is Limited*, and *Fair Lending: Data Limitations and the*

Fragmented U.S. Financial Regulatory Structure Challenge Federal Oversight and Enforcement Efforts, which note that “Congress should consider requiring additional data collection and reporting for non-mortgage loans.”²

Transparent demographic data from agricultural lenders may provide insight on such trends as the dramatic decline of Black representation in farming and farmland ownership, as chronicled in several government records:

- Federal Register announcement in Section 1002.104(A), “the share of minority representation in farming, particularly that of Black farmers, has declined sharply over the last 100 years.”
- U.S. Census Bureau 2019; USDA 2019: Even though Black, American Indian, Hispanic, Asian-Pacific American and other underserved populations represent nearly one-quarter of the US population, they operate less than 5 percent of the nation’s declining number of farms, and cultivate less than 1 percent of its farmland.
- 2022 Census of Agriculture: Over the five years from 2017 to 2022, there has been an 8.1% decrease in Black farmers and a 3.4% decrease in Native American farmers and ranchers.

Conclusion

The undersigned organizations urge you to oppose any efforts to weaken, overturn, or provide exemptions to the Consumer Financial Protection Bureau (CFPB) Rule 1071 on Small Business Lending Data Collection under the Equal Credit Opportunity Act, including exemptions for the Farm Credit Administration in the Farm Bill to CFPB Rule 1071.
